L02 – Virtual Information Treasure Hunt Reflection:
Working online through Microsoft Teams, our group coordinated research responsibilities efficiently despite never meeting in person. I contributed by locating and summarizing scholarly sources relevant to information overload, and we shared our findings in real time. The collaborative environment allowed us to divide tasks smoothly, stay accountable, and compile the final document with clarity.

L08 – OSINT Group Presentation Reflection:
For this assignment, our group met virtually using Teams to divide sections of the presentation and discuss research findings on OSINT techniques. I focused on conducting research to support content on active and passive intelligence gathering. The consistent online communication helped us ensure our slides were cohesive, accurate, and clearly explained for peer audiences.

L10 – Infographic on a Security Concept Reflection:
Our team used Teams to coordinate design and content development for the infographic. I helped research malware incidents and protection strategies, and also assisted in refining the graphic layout to make it visually appealing and easy to follow. Collaborating fully online worked well, everyone shared files, provided feedback, and polished the final product together.
